

Walkthrough

Everything in COMVERA, in pictures: the public website, the demo anyone can try, the built-in guided walkthrough, what it looks like for a mine or site and for a contractor, Exchanges, and the owner's tools. Every picture is a screenshot of the real app. At the end is the list of what is still needed to launch.

The website

SAFETY FILES AND CONTRACTOR COMPLIANCE · SOUTH AFRICA

Build, manage and prove your safety files – for every site.

COMVERA is where contractors keep their safety documents, create what is missing and build a professional safety file for each site or client. Mines and sites use it to set requirements, review files and see who is cleared to work.

The public home page: what COMVERA is, who it is for, and Start free trial.

FEATURES

Everything a safety file needs, in one place.

COMVERA covers the whole life of a safety file: what is required, the documents themselves, review, the people on site, and keeping it all current.

**Safety File Builder**

Pick a site or client, see every document it needs, reuse what you have, create the rest, and compile one professional PDF.

**Document Studio**

Risk assessments, method statements, policies and appointment letters, branded as yours, in PDF and Word, for you to check and sign.

**Requirements that make sense**

Starter lists for mines and construction, each marked as a legal, site or best-practice requirement, and required or optional.

**Review and approval**

Sites review section by section, ask for changes, and mark Site Ready with a verification code.

**Gate clearance**

Each worker is cleared only with a valid medical and induction, on a file that is approved.

**Nothing expires quietly**

Reminders at the days you choose, and a compliance agent that tells the right person what needs attention.

**Share securely**

Expiring links for auditors and clients, and individual documents or a merged PDF for the site.

**Built for POPIA**

Every company sees only its own data. ID numbers are never stored in full. Every action is logged.

Features: everything COMVERA does, in plain language.

FOR CONTRACTORS

Your documents, your safety files, every site.

COMVERA is your company's own document and safety file platform. Build files for every client – mines, construction companies and private clients – from one library.

What you can create

- ✓ Site-specific risk assessments and method statements, with the tools you use
- ✓ Health and safety plans, policies and safe work procedures
- ✓ Statutory appointment letters and registers
- ✓ Toolbox talk, induction and training records signed on site
- ✓ Complete, bound safety files for each site or client

Who pays?

You subscribe to COMVERA for your own company. That covers every safety file you build, for any client.

When a mine or site on COMVERA invites you, it may **sponsor** your file for its site. A sponsorship covers that one site's requirements and safety file. Files for other clients need your own plan.

[See contractor plans](#)

Start building today

For contractors: build a safety file once and reuse it for every site and client.

FOR SITES AND MINES

Know which contractors are ready to work — today.

Set what every contractor's safety file must contain, review what they submit, and see who is cleared at the gate.

What you can do

- ✓ Define your requirements per site: required or optional, legal, site or best practice
- ✓ Share one site code; each contractor gets its own file for your site
- ✓ Review documents section by section, request updates, and mark Site Ready
- ✓ Pick contractor documents and download them one by one or as one merged PDF
- ✓ Gate clearance with QR cards, inductions, toolbox talks, audits, permits and incidents

Sponsored contractor access

Your subscription lets the contractors you invite complete your site's requirements without paying — that is a **sponsorship**. It covers your site's file only, and you can end or resume it at any time.

You can see and download the documents contractors submit to your site. You cannot edit or delete a contractor's own documents.

[See site plans](#)

For mines and sites: one site code, many contractors, one review queue, gate clearance.

SAFETY FILE BUILDER

From blank page to a professional safety file.

The Safety File Builder walks you through every document a site or client needs — and tells you exactly what is still outstanding.

1

Choose the site or client

A site on COMVERA (type its code) or a client who isn't. Each safety file belongs to one site or project.

2

See what it needs

Every required and optional document, grouped and explained. Sites set their own lists; starter lists help you begin.

3

Reuse what you already have

Company documents are filed once. COMVERA offers them to every file, so nothing is uploaded twice.

4

Create what is missing

Document Studio drafts risk assessments, method statements, plans and appointment letters from your answers, with AI help where it is switched on.

5

Review and edit

Every draft is yours to check, change and sign. Nothing is treated as final until a person approves it.

6

Check readiness

Before you build the PDF, COMVERA shows what is present, what is waiting for review, what expires soon and what is missing.

7

Preview, build and share

One bound PDF with a cover, contents, section dividers and page numbers. Download it, send a secure link, or submit it to the site.

The Safety File Builder: the guided way to put a complete safety file together.

HOW IT WORKS

One platform for contractors and the sites they work on.

CONTRACTORS

Create your account and company profile.

File your company documents once.

Create a safety file for a site (with its code) or for your own client.

Fill the gaps with Document Studio, check readiness, and send or submit the PDF.

Keep it current: reminders tell you before anything expires.

SITES AND MINES

Create a site and choose what every safety file must contain.

Share the site code or invite contractors by email.

Review submissions in one queue; ask for updates where needed.

Mark files Site Ready and clear workers at the gate.

Run inductions, toolbox talks, audits and permits on the same record.

Who pays for what

Contractors subscribe for their own company and safety files. Sites and mines subscribe to manage contractor compliance, and sponsor their contractors' files for their own sites. Everyone starts with a 14-day trial of the full product; when it ends nothing is deleted, and you choose a plan to keep working.

How it works, step by step, for both sides.

PRICING

Simple plans for contractors and for sites.

Every account starts with 14 days of the full product. No card needed. When the trial ends nothing is deleted.

Contractors

Your own company account: build and manage safety files for every client.

Contractor Starter

R399 / month

Your own company account: up to 5 of your own safety files at a time, Document Studio with AI drafting, exports.

- ✓ Your own safety files for up to 5 clients at a time
- ✓ Document Studio with AI drafting
- ✓ Expiry reminders
- ✓ Up to 5 people

[Start free trial](#)

Contractor Pro

R899 / month

Unlimited safety files for every client, more seats, AI drafting and expiry detection, external share links.

- ✓ Unlimited safety files and clients
- ✓ Secure share links for clients
- ✓ AI drafting and expiry detection
- ✓ Up to 200 people

What's left to launch

The software is finished and tested (195 automated tests). What remains are accounts and settings only the owner can create — about 2 hours, plus waiting for the domain and email checks. Full click-by-click instructions are in **docs/GO_LIVE.md**.

1. **Merge the work on GitHub.** Open the pull request and click *Merge pull request*.
2. **Create a Render account** (render.com, sign up with GitHub) and add a card.
3. **Create COMVERA on Render in one click:** New → Blueprint → choose the repository. Enter your email for `PLATFORM_ADMIN_EMAILS` and `SUPPORT_EMAIL`. Wait until it shows *Live*.
4. **Sign up as yourself** and confirm your email (from Render's log until email is set up). Check that *More* → *Platform* appears.
5. **Make the lifetime promo code** for family and friends: More → Platform → Promo codes (100% off, no end date, limited uses).
6. **Buy the domain** (e.g. comvera.co.za, about R99/year), add it in Render, add the CNAME record at the registrar, then set `APP_URL`.
7. **Set up email with Resend:** verify the domain, create an API key, set `SMTP_URL` and `EMAIL_FROM` in Render. Needed for confirmations, resets, invitations, reminders and Exchanges.
8. **Optional — AI:** buy \$10–\$20 credit at console.anthropic.com and set `ANTHROPIC_API_KEY`. Everything works without it.
9. **Uptime check:** add the GitHub variable `COMVERA_URL` so you are emailed if the site goes down.
10. **Backups:** confirm Render's daily database backups and disk snapshots; do the monthly restore test.
11. **First real test:** sign up your parents with the promo link, build a safety file, try an Exchange (see GO_LIVE §7).

Before charging anyone (not needed for the beta)

- An attorney finishes the draft *Privacy* and *Terms* pages.
- Decide on card payments (Stripe is built in; check it pays out to your South African business) and set real prices under Platform → Pricing.
- Add virus scanning for uploads before opening sign-ups to the public.

Running cost

About **R265 per month** for the beta: Render web service $\approx$ R126, database $\approx$ R108, document storage $\approx$ R23, domain $\approx$ R8, email R0 (free tier), monitoring R0. AI is optional, roughly R50–R400 a month for a small beta.

Generated 2026-10-07 by scripts/walkthrough.mjs from a test database.
